

PIERINGER GROUP

GIVE WASTE A SECOND CHANCE

LADIES AND GENTLEMEN,

Ing. Christian Pieringer
Managing Partner

With 30 years of experience in waste management, we are familiar with the beginnings of modern recycling management, which was initiated at the European level in the 1990s by the Waste Framework Guidelines and its sub-regulations. Now we are on the threshold of the „Next Big Thing“. At the European level, there is talk of the „Circular Economy“ and the „Green Deal“. These steering measures and the demand for higher recycling rates will shape the next decade. Therefore, we have decided to complement our activities in waste management with a promising offer for you:

With the acquisition of Dekora Packaging GmbH, we will close our in-house cycles and in the future also provide you with advice on eco-design and the selection of materials for packaging. Sustainable recycling begins with the design of the packaging, the selection of materials and the production of the packaging with state-of-the-art technology. - This is where we will make our contribution!

It is important to us that we view the future of recycling with the necessary realism! - We do not believe in a zero waste economy. There will always be a certain amount of waste that cannot be recycled. For this business sector, the Pieringer GROUP will continue to offer its classic waste management services. „WtE - Waste to Energy“ remains an essential business segment for our group.

Our international experience in Central Europe (CE) and Central-Eastern Europe (CEE) is convincing more and more customers from industry and waste management. With the new corporate structure of Pieringer Abfall Verwertung GmbH as a holding for 10 operative companies in nine countries, 35 employees and an annual turnover of about 40 million euros, we are optimally positioned for the future.

I want to thank our business partners for their trusting cooperation as well as my employees and managing directors, without whom this success story would not be possible.

Markets change – in what you can always trust is the handshake quality of my team and me! In this spirit, I look forward to continuing good business relations with you.

Mattighofen, summer 2023
Yours, Christian Pieringer

RECYCLING AND DISPOSAL OF VARIOUS PLASTICS

Pieringer Group has been committed to building European recycling solutions for plastics from an early stage. Thanks to our experience in raw materials trading, we can offer individual recycling and disposal solutions for plastics such as polypropylene, polyethylene, HDPE, mixed plastics and many more. Furthermore, we have established ourselves as one of the leading partners in Central Europe for agricultural films such as asparagus films, cucumber films, tunnel films, silage films, etc. Whether pure or mixed agricultural film loads – our service portfolio in the film sector is extensive. The Pieringer Group takes care of the professional disposal and recycling of your agricultural films. Our team will explain to you competently what options are available for your film types.

RECYCLING AND DISPOSAL OF FERROUS METALS

For many years we have been very well established on the Austrian and European market in the field of iron scrap recycling and disposal, working with long-standing partners and foundries. We recycle, collect and distribute all qualities and grades that fall under FE metals, such as ferrous scrap and steel scrap. We are credit protection insured and offer our customers the security of being able to purchase even high-priced secondary raw materials such as steel scrap. Therefore, we are able to negotiate deals with more than one load.

The Pieringer Group takes over the recycling and the transport of light and heavy old steel scrap (E1, E3), light new steel scrap (E2, E6, E8) and shredder scrap (E40) as well as shredded scrap from waste incineration (MVA, VA)

ALUMINIUM BEVERAGE CANS (UBC)

In recent years, the Pieringer Group has specialised itself on UBC (used beverage cans) - aluminium beverage cans and is now a respected supplier to leading aluminium recycling plants in Europe and international. The collection, processing, recycling and recovery of aluminium beverage cans (UBCs) has become an important and stable line of business for us. Thus we are sorting and processing the UBC aluminium cans and tinplate cans, we are also in a position to take lower qualities, whether in bales, packets, briquettes or in bulk. Aluminium is corrosion-resistant and can be recycled repeatedly without losing its material properties, which makes aluminium beverage cans (UBC) the perfect product for the circular economy. The great advantage of recycled aluminium is that the recycling process, compared to primary production, requires only about 5% of the energy. In aluminium can recycling, the closed loop is already reality. Can-to-Can in 60 days.

PROFESSIONAL DISPOSAL OF WOODEN SLEEPERS

We transport discarded railway sleepers to specialised recycling plants throughout Europe – by road and rail. For years, the Pieringer Group, as the industry leader in Austria and now also throughout Europe, has been ensuring the proper transport and disposal of railway sleepers (hazardous waste), which are transported by train or truck to specialised recycling plants, after appropriate crushing. Our company is thus one of the most important contacts in this field. We work hand in hand with well-known companies throughout Europe that specialise in thermal recycling of railway sleepers.

With our advanced international network, we are able to offer you europe-wide collection and recycling of the following fractions:

- railway sleepers without iron
- railway sleepers with iron (bolts and plates)
- Oil-impregnated poles and similar wastes (e.g. wooden paving stones)

SUBSTITUTE FUELS: WHEN WASTE BECOMES A RESOURCE

Substitute or secondary fuels are obtained from residual waste as well as industrial and commercial waste. The importance of these fuels is increasing, because the incineration, without the sensible utilisation of the energy and/or waste heat, is losing importance. The ecological and economic benefits are increasingly in focus. The waste industry is therefore faced with the task of converting commercial and other waste, including plastics and waste oil, to produce high-quality, homogeneous substitute fuel. As an expert in waste disposal and waste logistics, the Pieringer Group early recognise this trend and has been marketing valuable substitute and secondary raw materials with comprehensive know-how for years. Whether a regional solution to the domestic cement industry or the complete export processing of substitute fuel, which is subject to notification, to other EU countries, we will be happy to support you with the optimal marketing strategy.

NOTIFICATIONS FOR THE EXPORT OF WASTE

Within the Pieringer Group, our I.S.G. Industrieservice founded in 1998, which is now the Pieringer Recycling Austria GmbH – change of name at the beginning of April 2023) is the first point of contact for the notification of waste, remediation of contaminated sites and various export procedures in Austria. We responded at an early stage to the internationalisation in the field of waste disposal and the disposal of problematic substances. Now we also handle notifications with our German company Dekora Packaging & PRG Recycling GmbH and our Polish company, PRP Pieringer Recycling Polska Sp. z o.o. in Poland. When exporting waste requiring notification, such as railway sleepers, rejects, substitute fuels, ferrous metals (MBA scrap), plastic and rubber, plastic packaging, agricultural film, hay bale film, asparagus film, DSD 310 and building rubble, a special permit is required in accordance with the new EU Waste Shipment Regulation from 1.1.2021.

We take over the entire process of notifying your waste for cross-border waste disposal and thus offer a solution transfer of risk and obligation „ex work“ (including the provision of the security deposit). We select suitable recovery facilities for our customers, submit the notification, monitor it, act as the contact and are the contact for all authorities involved.
